## DETAILED ACTION

### *Allowable Subject Matter*

1. Claims 1, 3-6, 8, 9, 11-14, and 16-20 are allowed.
2. The following is a statement of reasons for the indication of allowable subject matter: The closest prior art to the claimed invention is to Yamaguchi, Ryosuke et al. (JP 06010142 A) that is described in the Examiner's November 7, 2008 office action. The allowable subject matter over Yamaguchi concerns the claimed "thermal conductivity adjusting member" as recited in all independent claims of Applicant's invention. As is known in the art, the thermal conductivity of a material is an intrinsic, isotropic, property of a material<sup>1</sup>. Applicant's invention accomplishes the claimed "adjustment" of "thermal conductivity" by either having different materials or cavities (with different thermal conductivities) where the adjustment of the thermal conductivity is desired. See the "Regions" and claimed "sections" of Figures 1, 7. The thermal conductivity is then not to be confused with a heat transfer coefficient, which, as is known in the art, are coefficients used to quantify the three modes of heat transfer – conduction, convection, and radiation. The Examiner's citation that Yamaguchi's presumed equivalent "thermal conductivity adjusting member" at 32, Figure 7 is, per the machine translation, "silica glass sheet metal" suggesting that 32 is a *uniform* material with a *single isotropic thermal conductivity*. Thus Yamaguchi's presumed equivalent "thermal conductivity adjusting member" at 32 *cannot* "adjust thermal conductivity" in the manner disclosed by Applicant.
